Kornith, E.
NEWER INORGANIC PIGMENTS. [1961] [12]p.
Order from SLA \$1.60

62-10040

Trans. of Angew[ande] Chemie (West Germany)
1952, v. 64, no. 9/10 p. 265-269.

DESCRIPTORS: *Pigments, *Inorganic substances,

The object of the investigation was an economical, cement-stable, inorganic blue pigment. Systematic treatment was successful in finding, in Manganese blue, a technically satisfactory solution. In addition, different other blue pigments, consisting of binary (analogous to Rinnman green) or ternary oxide compounds, were found. The work was extended to rust-protective pigments and subsequently the ferrites of Pb and Ba, and especially of lead cyanamide were found to be very good rust-protective pigments.
